I don't believe so.

Did Ann from the CRL Lab send the results for the Nitrates from the unpreserved Anion Samples?

Hi Cheryl,

That was a good question so I asked the lab and this is the response I got:

Yes, the coordinates in the X and Y columns mark the centroid of the spatial unit to which each record is located - the "40"s in the XY_Unit column indicate these records are located to the quarter-quarter section ("40" because each quarter-quarter measures approximately 40 acres).

Also, yes, these coordinates are in the NAD 1983 HARN Wisconsin Transverse Mercator projection, in meters - projection files in several formats are available at the link below, and the EPSG number is 3071, if that's helpful.

In your excel spreadsheet, what coordinate system are you using?

Sincerely,

Cheryl Burdett

Hi Cheryl,

I am attaching the data as it was received from the lab for our groundwater survey. Attached are two spreadsheets and a few maps(nitrate, chloride and a base map).

The first spreadsheet labeled DWP.... Contains all of the information. The second labeled WEAL... represents the file with redacted personal information that we will be using for any open record requests.

This is the confidentiality statement that was provided by our corporate council and hope you understand why we are taking this stance:

Please remember that this information is being sent to you in confidence. You have the same obligation of confidentiality that we do, which is to say that the proprietary and identifying information about the well or property owners, including their names and addresses, is privileged confidential information and may not be released by you without prior explicit written authorization.

Please reply to let me know that you received this email.

Thanks
